Education

University of Pittsburgh — Pittsburgh, PA
BS in Computer Science, Minor in Hungarian — *Dec 2021*

Experience

Founding Engineer — Nov 2022 – Present
Freedom Gateway — *Pittsburgh, PA*

- Developed and deployed Bitcoin ATM software, processing $20 million plus in transactions across hundreds of machines (**Java, Python, Docker, Arch Linux**)
- Led development of SGK ticket redemption kiosk, bringing the product from prototype to market with over 2,000 units sold
- Integrated AI tooling across dev lifecycle: **Claude Code** for feature development, custom **skills** and **MCP** for context-aware debugging, and automated error monitoring and alerts via Telegram
- Built responsive frontends for kiosk, web, and mobile applications (**React, TailwindCSS, Flutter**)
- Owned CI/CD pipelines and release infrastructure for client and backend systems. Used rolling-release schedule to rapidly iterate based on user feedback (**Gradle, JUnit, pytest, Unix Shell**)
- Wore multiple hats in a fast-paced startup: engineering, customer support, business analytics

Software Engineer — Feb 2022 – Nov 2022
BNY — *New York, NY*

- Designed and built internal personnel management software, featuring an automated change approval workflow to replace existing manual processes (**Angular, Java, SQL**)
- Collaborated directly with end users to refine requirements, test the application, and quickly ship new functionality
- Analyzed and patched vulnerabilities across 14 projects in **Spring** microservices ecosystem
- Documented common problems and solutions in dev environment to facilitate onboarding process

Summer Analyst - Technology — Summer 2020 & 2021
BNY — *Remote*

- Reduced API reponse times by 60% by implementing cacheing with **Elasticsearch**
- Developed REST API for upload and search of compliance data, replacing existing Excel file (**Java, MongoDB**)
- Won 2nd Place in intern hackathon with a **Python** application to compare and classify Excel macros

Projects

Edgelytics | *Python* — 2023 – Present

- Wrote algorithm to grade poker players based on historical performance
- Paired grading algorithm with web-scraping logic and risk model to identify and fund staking opportunities that may be profitable in online tournaments

Technical Skills

Languages: Java, JavaScript, TypeScript, SQL, Python, HTML/CSS, Dart, Unix Shell
Frameworks: React, JavaFX, Angular, Flask, Flutter, TailwindCSS
Cloud: AWS (Lambda, IoT Core), Google Cloud Platform (Firestore, Cloud Functions)
Developer Tools: Docker, systemd, Git
